Requests and comments from the members of the JAAM regarding clinical issues of COVID-19 as of April 13, 2020

1. Medical system in the community
   - There are hospitals that reject patients with a temperature of 37°C or higher even if they present with stroke.
   - The roles of individual medical facilities in the community should be designated based on the types of diseases that they can treat.
   - Facilities that accept COVID-19 patients should be prepared and quickly stratified. Temporary facilities should be established quickly.
   - Is it possible to dispatch medical staff from areas with few patients to areas with many patients?
   - A triage hospital should be designated in each community. Roles of each hospital should be defined.

2. Availability of guidelines/manuals
   - Although our hospital is not a designated facility for specified infectious diseases, the number of patients with pneumonia who are referred from other hospitals has increased in the daytime, including those referred from a hospital 30km away from our hospital, since we started accepting patients with fever.
   - When a patient whom we temporarily accepted was determined to require hospitalization, it took over 3 hours to find a hospital into which the patient could be admitted. Therefore, we had to stop accepting emergency patients for a while.
   - A triage hospital should be designated in each prefecture.
   - A system to enable hospitals to accommodate patients with mild COVID-19 should be put in place quickly.

3. Work environment for medical staff
   - The criteria of the public health center for COVID-19 testing are too strict. PCR test results should be provided in the shortest possible time.
   - Facilities that can accommodate hospital staff who had close contact with a patient who was later found to have COVID-19.
   - There is a concern that a large number of hospital staff will stop work.
   - There is a concern that a large number of hospital staff will stop work.

4. Availability of guidelines/manuals
   - We need psychological support for hospital staff. We want to support our staff who do not (cannot) go home for fear of infecting their family members.
   - Facilities that can accommodate hospital staff who had close contact with a patient who was later found to have COVID-19.

5. Work environment for medical staff
   - We need psychological support for hospital staff. We want to support our staff who do not (cannot) go home for fear of infecting their family members.
   - Facilities that can accommodate hospital staff who had close contact with a patient who was later found to have COVID-19.

6. Availability of guidelines/manuals
   - We need psychological support for hospital staff. We want to support our staff who do not (cannot) go home for fear of infecting their family members.
   - Facilities that can accommodate hospital staff who had close contact with a patient who was later found to have COVID-19.

7. Availability of guidelines/manuals
   - We need psychological support for hospital staff. We want to support our staff who do not (cannot) go home for fear of infecting their family members.
   - Facilities that can accommodate hospital staff who had close contact with a patient who was later found to have COVID-19.

8. Availability of guidelines/manuals
   - We need psychological support for hospital staff. We want to support our staff who do not (cannot) go home for fear of infecting their family members.
   - Facilities that can accommodate hospital staff who had close contact with a patient who was later found to have COVID-19.
